About Me

4th-year Computer Engineering student seeking a Full-Stack Developer internship to apply and expand technical skills. Passionate about software development, IoT networks, and system architectures. Experienced in building cross-platform applications (React Native) and integrating backend systems (Python, SQL). A quick learner eager to tackle real-world technical challenges and contribute effectively to a fast-paced engineering team.

Skills

Technical Skills

- Front-End: React Native, Expo, React Navigation, TypeScript, JavaScript
- Back-End: Python, Node-RED, MQTT
- Database: MySQL, SQL
- Familiar: HTML, CSS, C, C++, AWS

Tools

- Git & GitHub
- Figma
- Cisco Packet Tracer

Education

Sripatum University

- Bachelor of Engineering in Computer Engineering
GPAX: 3.30 | Expected Graduation: 2027

Work Experience

Bonchon | Part-time Staff July – 2026 – Present

- Demonstrated strong time management and responsibility by balancing academic studies with part-time employment during the semester.
- Collaborated effectively with team members during peak weekend shifts to maintain service quality and efficiency.

7-Eleven | Store Assistant June – 2023 – October – 2024

- Managed daily store operations, including POS transactions and inventory restocking, ensuring a seamless customer experience.
- Resolved customer inquiries efficiently, demonstrating strong communication and problem-solving skills under high-traffic conditions.

Projects

Smart Course Registration Mobile Application

Full-Stack Developer | React Native, Python, SQL

- Developed a mobile application featuring AI-assisted schedule planning and an automated batch registration system using React Native.
- Implemented a Python backend to process registration logic, check for class time conflicts, and monitor available section seats.
- Managed and queried an SQL database to handle relational data such as course catalogs, section availability, and student enrollments.

IoT Smart Aquaponics Farming for Wolffia

IoT Developer | Node-RED, MQTT, Sensor Integration

- Designed a smart farming system integrating pH, TDS, and temperature sensors to monitor water quality.
- Configured sensor telemetry code and cloud dashboard architectures for real-time monitoring via Node-RED and MQTT.

Industrial Container Tracking

System Network & System Designer | LoRaWAN, Cisco Packet Tracer

- Designed the system architecture and network topology for a long-range industrial container tracking solution.
- Conducted network simulations using Cisco Packet Tracer to evaluate system connectivity and data transmission reliability.

Soft Skills

- Time Management
- Problem-Solving
- Teamwork & Collaboration
- Communication
- Adaptability

Languages

- Thai (Native)
- English (Intermediate)
